AMENDED CLAIMS

[received by the International Bureau on December 22, 2004 (22.12.04); new claims 18 and 19 added; remaining claims unchanged (2 pages)]

5

18. (Added) A mechanism according to claim 17, wherein different main load transmitting regions are provided depending on the magnitude of a load applied to an area where said shaft tooth section (22) and said hub tooth section (28) mesh with each other.

10

19. (Added) A mechanism according to claim 18, wherein the magnitude of the load selectively represents a low load, a medium load, and a high load, and said main load transmitting regions (a, b, c) for transmitting the low load, the medium load, and the high load, respectively, are established successively in a direction from a crowning top (PO) of crowned peak (22a) toward said shaft shank (24).
